

KP1H Mixing Centers

The dispensing systems you employ to dispense your cleaning chemicals make a statement about how much you value your customer's business. Knight's new Locking Stainless Steel KP1H Mixing Center coupled with our Patent Pending KP1H Proportioning System is the industry's best demonstration of your commitment to the customer.

Keying on the unique modularity and compact design of the KP1H Proportioner, the new Mixing Center is an exceptional value. Fabricated from #304 Stainless Steel, this structurally robust cabinet will resist normal wear and tear that degrades and disables competing plastic cabinets. The locking front cover provides secure storage for cleaning concentrates and prevents product pilferage.

KP1H Locking Cabinets fit from one to two KP1H Proportioners to feed from one to five chemicals. These KP1H Centers are sized for round or square 1 gallon containers. Custom units are also available.

Designed Around Your Needs
