

KNIGHT

K'nect

The Intelligent Closed Loop

KEY BENEFITS:

- Fill spray bottles or buckets at differing flow rates with the same concentration.
- Laser drilled dilution ports for consistent precision.
- Customized dilutions matched to your chemistry.
- Simplify your installations & training.
- Tamper proof

K'Nect - the industry's most intelligent closed loop system finally solves the problem of getting consistent and accurate dilutions for both low flow spray bottle filling and high flow mop bucket filling from a dispenser. Knight's patented design automatically adjusts to the varying flow rates.

Up till now, a bottle fill dispenser would pull almost double the amount of concentrate than a bucket fill dispenser when using the same tip. Knight's patented design compensates and even allows for unique dilutions between bottle filling and bucket filling from a single straw insert. Laser cut dilution holes eliminate the additional costs of metering tips while offering precise dosing.

The single straw makes insertion into bottles easy and fast. Once seated into the bottle, these inserts will stay preventing leaks and tampering. Inserts and caps are available in a variety of colors and a wide range of dilutions. Stock inserts work with any dispenser having flow rates between 1 to 4 gpm using our mated caps. Current designs fit 38mm bottle necks offering dilutions ranging from 16 oz. to 1/4 oz per gallon.
